Scenario:
You are a college student who is struggling to find hobbies that fit into your schedule. You want to try to find hobbies quickly and easily with others that you will enjoy.

Task 1:
Set up an account with HobbyFinder filling out all your details.

Task 2:
Search for different clubs you might like and try to message someone in the club.

Task 3:
Browse through your upcoming events and see what clubs you have meeting this upcoming week.

Notes:

What changes should you make to your application:
1. Explain how to navigate through the menus at first
2. Include more information on how dates work (is it biweekly, weekly, monthly, etc)
3. Need to show how to message people in other clubs because right now the functionality does not look like it is all there

What you need to keep the same for your application:
1. Menus are easy once you know what they are
2. Has familiar features to social media so it is easy to know what to expect
3. The ability to search for clubs in a manual fashion it is not all automated / recommended
